

Evaluation report of the doctoral thesis submitted by Bram Vancraeynest-De Cuiper

I very much enjoyed reading Bram's extensive and detailed thesis. Several highly technical and mathematical concepts are explained with a clarity that is usually only displayed by a more experienced researcher. The thesis is pedagogical and well-structured.

The new results obtained by the applicant constitute important contributions to a timely and very active research direction. These results are contained in 5 research papers, which is a notably high number for a PhD student. The research papers are technically of very high quality, contain several original ideas, and are undoubtedly state-of-the-art.

Based on these considerations, I am of the opinion that this doctoral thesis easily meets the criteria to proceed to the next part of the examination.
